EDUCATION

Boise State University — B.S. in Computer Science

Aug 2024 – Dec 2026

GPA: 3.94 · Dean's List with Highest Honors

EXPERIENCE

IT Help Desk Technician — Boise State University

Jan 2025 – Present

- ▶ Built and deployed an AI support agent using BSU's enterprise LLM platform and RAG, indexing 20,000+ ServiceNow tickets and knowledge base articles to surface relevant resolutions; adopted by help desk staff as the primary search tool over ServiceNow's native search
- ▶ Resolve 50+ technical incidents per week for a user base of 25,000+ across Microsoft Entra MFA, VPN, PeopleSoft, and eduroam through systematic triage
- ▶ Authored and maintained knowledge base articles documenting novel troubleshooting procedures, enabling consistent resolution across 15+ help desk staff

PROJECTS

JavaDropbox ↗

Sep 2025 - Present

- ▶ Prevented path traversal attacks by normalizing all user-supplied file paths with `java.nio.file.Path` and validating that resolved paths remain within the configured serving directory root before any I/O operation
- ▶ Implemented on-the-fly ZIP archive generation for directory downloads using `java.util.zip.ZipOutputStream`, recursively streaming folder contents into an in-memory `ByteArrayOutputStream` returned as a Spring Resource
- ▶ Developed a version restore mechanism supporting two modes — OVERWRITE (replaces current file after versioning it) and COPY (creates a named duplicate like `report_v3.pdf`) — selectable per restore request

Technologies: Java 21, Spring Boot 3, Spring Security, JPA, PostgreSQL, Thymeleaf, GitHub Actions, Docker, Gradle

GoProxy ↗

Jun 2026 – Present

- ▶ Chose `sync.RWMutex` over a standard `Mutex` for backend health status to allow concurrent request-handler reads without blocking, reserving exclusive locks for the infrequent health-check writer
- ▶ Implemented lock-free round-robin indexing with `sync/atomic.AddUint64`, avoiding mutex contention on the hot path where every inbound request increments the routing counter
- ▶ Verified atomic counter correctness under contention by spawning 1,000 concurrent goroutines and asserting exact counter values, run with Go's `-race` detector enabled

Technologies: Go, net/http, httputil, JSON, Unit Testing

Stackage Server ↗

Apr 2023 – July 2023

- ▶ Built a Node.js/Express backend for a social mobile application with real-time data synchronization utilizing Cloud Firestore
- ▶ Designed and documented a RESTful API specification supporting complex user interactions, session management, and feed generation
- ▶ Diagnosed and resolved critical race conditions in the post-sync logic, reducing API latency by 20% through targeted query optimization

Technologies: Node.js, Express.js, Firebase/Firestore, REST APIs, JavaScript

SKILLS

Languages: Java, Go, Python, JavaScript, SQL, Bash

Frameworks & Libraries: Spring Boot, Spring Security, Node.js, Express.js, React, REST APIs

Tools & Infrastructure: Git, GitHub Actions, PostgreSQL, Firebase, Docker, Gradle, npm, Linux
