EDUCATION

Boise State University

BS, Computer Science

Expected Dec 2026

Boise, ID

- Deans List with Highest Honors
- 3.94 in major GPA

Work Experience

Boise State University

IT Help Desk

Feb. 2025 – Present

Boise, ID

- Provided technical support to over 25,000 university community members through a ticketing system, troubleshooting hardware, software, and network issues and delivering clear, empathetic resolutions.
- Demonstrated strong written and verbal communication skills by translating technical diagnostics into plain-language guidance for non-technical users, receiving positive feedback on clarity and professionalism.
- Proactively identified patterns in high-volume ticket queues and suggested improvements to support workflows, increasing team efficiency and reducing time-to-resolution for common issue categories.

Projects

JavaDropbox | *Java 21+, Spring Boot 3+, JavaScript, GitHub Actions*

<https://github.com/mercaus/JavaDropbox>

Boise, ID

- Designed and implemented a responsive frontend using HTML5, CSS3, and ES6+ JavaScript with dynamic drag-and-drop file upload interactions, leveraging browser development tools to debug, test, and optimize client-side behavior.
- Built and documented RESTful API integrations between the JavaScript frontend and a Java/Spring Boot backend, resolving complex cross-origin and authentication issues through systematic analysis and testing.
- Engineered a CI/CD pipeline via GitHub Actions to automate builds and deployments, suggesting and implementing process improvements that reduced manual overhead and increased release reliability.

Stackage-Server | *Node.js, Express.js, Cloud Firestore, RESTful APIs*

<https://github.com/StackageApp/stackage-server>

- Developed and maintained a performant Node.js/Express.js backend serving a JavaScript-driven mobile application, troubleshooting network and API issues to ensure uptime and reliability in a fast-paced environment.
- Resolved complex technical issues by analyzing race conditions in real-time data synchronization logic, testing solutions, and documenting root causes to prevent recurrence and improve system stability.
- Designed RESTful APIs and optimized SQL queries to manage user profiles, posts, and messages, reducing API latency by 20% and supporting a seamless end-user experience across the platform.
- Created and maintained a shared team knowledge base documenting system behavior and known issues, coordinating across frontend and backend contributors to address problems quickly and efficiently.

SKILLS

Core Technologies: Python, Java, SQL (PostgreSQL), JavaScript, Spring Boot, Node.js, Express.js, Bash Scripting

Development Tools: Git, GitHub Actions (CI/CD), Gradle, npm, Firebase CLI, Linux & Windows Environments
