Mev Causevic

mev@mevcaus.dev ❖ (208) 473-6720 ❖ Boise, ID ❖ mevcaus.dev

EDUCATION

Boise State University **Expected Dec 2026**
BS, Computer Science *Boise, ID*

- Dean's List four consecutive terms (Fall 2024 to Spring 2026)
- Major GPA: 3.79
- Relevant coursework: Data Structures, Operating Systems (Fall 2026), Computer Networks (Fall 2026), Computer Security, Generative AI Application Development, Design and Analysis of Algorithms (Fall 2026)

WORK EXPERIENCE

Boise State University **Feb. 2025 – Present**
IT Help Desk *Boise, ID*

- Built a RAG support agent solo in about a month, on Claude Sonnet 5 after testing other LLMs, that answers help desk questions from past ServiceNow tickets and KB articles; about 20 coworkers use it
- Exported 20,000+ ServiceNow tickets and wrote a Python script that uses regex to strip phone numbers, emails, and other personal info before indexing
- Automated a weekly refresh: a ServiceNow scheduled job pulls the 100 most popular KB articles and updates the agent's knowledge base through a REST API

Hack Reactor **May 2024 – Sep. 2024**
Software Engineering Immersive Resident *Remote*

- Ran 10 to 15 one-on-one debugging sessions a day over Zoom for a cohort of 25 students, working through Node.js environment errors, code bugs, and Git issues
- Taught students why and how each issue happened rather than fixing it, and answered questions in Slack

PROJECTS

JavaDropbox | *Java, Spring Boot, Spring Security, PostgreSQL, React*
https://github.com/mevcaus/JavaDropbox

- Kept the filesystem as the source of truth for files and PostgreSQL for ownership, versions, and audit history, so files added outside the app (scp, a mounted drive) still show up
- Traced every POST failing with 403 to Spring Security's deferred CSRF token loading, which a JSON-only SPA never triggers. Turned it off and added an Axios interceptor that sends the token in X-XSRF-TOKEN
- Added 700+ automated tests (JUnit 5, MockMvc, Vitest, Playwright) that run in GitHub Actions CI, with every database test on real PostgreSQL 15 through Testcontainers

shop-watch | *Go, DigitalOcean, Linux (systemd), Caddy, Discord API*

- Run a paid Go service that watches about 300 Shopify listings, polling products every 30 seconds with jitter, and alerts 10 paying subscribers to restocks and price drops on Discord with one-tap cart links
- Deployed it on a DigitalOcean droplet under a hardened systemd unit behind Caddy TLS, with Bash and PowerShell scripts for go vet, cross-compiling, health checks, and rollback. Running since September 2026
- Added a 15-minute dead-man switch for failed polls and a /health endpoint that returns 503 when degraded

GoProxy | *Go (standard library only)*
https://github.com/mevcaus/goproxy

- Built a Layer 7 HTTP load balancer with round-robin and least-connections routing and active health checks
- Used lock-free sync/atomic counters for shared routing state and added 26 tests under go test -race, including one that hits the counters from 1,000 goroutines and checks the exact totals

SKILLS

Languages: Java, Go, Python, JavaScript, TypeScript, SQL, C, Bash
Frameworks & Testing: Spring Boot, React, Node.js, Express, JUnit 5, Testcontainers, Playwright
Tools & Platforms: PostgreSQL, Docker, GitHub Actions (CI/CD), Git, Linux (systemd), DigitalOcean, Claude Code
