EDUCATION

Boise State University **Expected Dec 2026**
BS, Computer Science *Boise, ID*

- Dean's List four consecutive terms (Fall 2024 to Spring 2026)
- Major GPA: 3.79
- Relevant coursework: Software Engineering, Data Structures, Operating Systems (Fall 2026), Computer Networks (Fall 2026), Algorithms (Fall 2026), Full Stack Web Development, Computer Security, Generative AI Application Development

WORK EXPERIENCE

Boise State University **Feb. 2025 – Present**
IT Help Desk *Boise, ID*

- Built a RAG support agent solo in about a month that answers help desk questions from past ServiceNow tickets and KB articles, used by ~20 coworkers
- Exported 20,000+ ServiceNow tickets and wrote a Python script using regex to strip phone numbers, emails, and other personal info before indexing
- Automated a weekly refresh: a ServiceNow scheduled job pulls the 100 most popular KB articles and updates the agent's knowledge base through a REST API

PROJECTS

JavaDropbox | *Java 21+, Spring Boot 3+, JavaScript, GitHub Actions*
https://github.com/mevcaus/JavaDropbox *Boise, ID*

- Built a layered Spring Boot REST API (8 controllers, 3 services, 4 JPA repositories, DTOs) that stores files on disk and metadata, versions, and an audit log in PostgreSQL
- Rewrote the UI from server-rendered Thymeleaf to a React 19 SPA with Redux Toolkit, plus Axios interceptors that fetch CSRF tokens and sign out only on 401
- Enabled CSRF protection in Spring Security and traced every POST failing with 403 to lazy token loading, which never wrote the cookie for a JSON-only SPA
- Wrote 95 automated tests (JUnit 5, MockMvc, Testcontainers PostgreSQL, Vitest, Testing Library) that run in GitHub Actions CI with a PostgreSQL service container

shop-watch | *Go, DigitalOcean, Linux (systemd), Caddy, Discord API*

- Run a paid Go service that monitors Shopify stores and alerts 10 subscribers to restocks and price drops through Discord, with one-tap cart links
- Deployed it to a DigitalOcean droplet under a hardened systemd unit behind Caddy TLS, with Bash and PowerShell scripts for go vet, cross-compile, health check, and rollback
- Added per-target health states, a /health endpoint that returns 503 when degraded, a dead-man switch after 15 minutes without a successful poll, and crash detection

SKILLS

Languages: Java, Go, Python, JavaScript, SQL, C, Bash
Frameworks & Testing: Spring Boot, React, Node.js, JUnit 5, Testcontainers
Tools & Platforms: PostgreSQL, Docker, GitHub Actions (CI/CD), Git, Linux (systemd), DigitalOcean
