EDUCATION

Boise State University — B.S. Computer Science

Aug 2024 – Dec 2026

GPA: 3.94 · Dean's List with Highest Honors

Coursework: Data Structures, Algorithms, Software Engineering, Database Systems, Operating Systems, Computer Networks

EXPERIENCE

IT Help Desk Technician — Boise State University OIT

Feb 2025 – Present

- ▶ Resolve 50+ technical incidents per week for a user base of 25,000+ across Microsoft Entra MFA, VPN, PeopleSoft, and eduroam, reducing average resolution time through systematic triage
- ▶ Author and maintain knowledge base articles documenting novel troubleshooting procedures, enabling consistent resolution across 15+ help desk staff

PROJECTS

JavaDropbox ↗

Sep 2025 – Present

- ▶ Architected a self-hosted cloud storage platform with Java 21/Spring Boot 3, implementing a layered service architecture with JPA/PostgreSQL for file metadata persistence and version control (up to 10 revisions per file)
- ▶ Engineered path traversal prevention through canonical path validation on all file I/O endpoints, securing upload, download, delete, and directory creation operations against directory traversal attacks
- ▶ Built a CI/CD pipeline using GitHub Actions with a PostgreSQL service container, automated Gradle builds, JUnit 5 tests, and Dependabot dependency graph submission for vulnerability tracking
- ▶ Implemented Spring Security with BCrypt password hashing, form-based authentication, session management, and a first-run setup filter to handle zero-config bootstrapping

Technologies: Java 21, Spring Boot 3, Spring Security, JPA, PostgreSQL, Thymeleaf, GitHub Actions, Docker, Gradle

GoProxy ↗

Jun 2026 – Present

- ▶ Built a Layer 7 HTTP load balancer from scratch in Go using only the standard library (net/http, net/http/httputil), implementing configurable reverse proxying across multiple backend servers
- ▶ Implemented round-robin request distribution with a server pool abstraction, routing incoming traffic across N configurable backends defined via a JSON configuration file
- ▶ Wrote comprehensive unit tests covering configuration parsing, URL validation, round-robin cycling correctness, and edge cases (malformed JSON, empty backends, missing files)

Technologies: Go, net/http, httputil, JSON, Unit Testing

SKILLS

Languages: Java, Go, Python, JavaScript, SQL, Bash

Frameworks & Libraries: Spring Boot, Spring Security, Node.js, Express.js, React, REST APIs

Tools & Infrastructure: Git, GitHub Actions, PostgreSQL, Firebase, Docker, Gradle, npm, Linux
